### Basic service, new deployment

### Replacing legacy EOX

### Simplify service provision

### Innovation service trial

# NFV deployment and evolve direction

2. Which is the most suitable maintenance SLA (Service Level agreement ) for VNF and NFVI?

- A. Same SLA as VNF (99.999%)
- B. Separate SLA for both VNF (99.999%) and NFVI (99.9%)
- C. Same SLA as NFVI (99.9%)
- D. Other

**62.1%**  
99.999%  
**SLA, Telco reliability**

**59.4%**  
**CI/CD makes NFV more efficiency**

2. Which one is most useful in order to make NFV deployment more efficient?

- A. Automatic Integration Tools
- B. CI (Continuous Integration)/CD (Continuous Delivery) for Parallel Deployment
- C. Pre-integrated Solution
- D. Others

**Towards future 5G: the construction of all cloud network**

Source: carrier investigation and interview report, 2017

1. Which is the most important NFV capability to support the evolution to the future 5G/IoT network ?

- A. Unified NFVI for Smooth Evolution
- B. Automatic Maintenance for OPEX Saving
- C. Devops for Quick New Service Launch
- D. Others

**42.1%**  
**DevOps is the key capability evolving to 5G/IoT**

**66.7%**  
**Enterprise/Verticals can exploit the value of NFV**

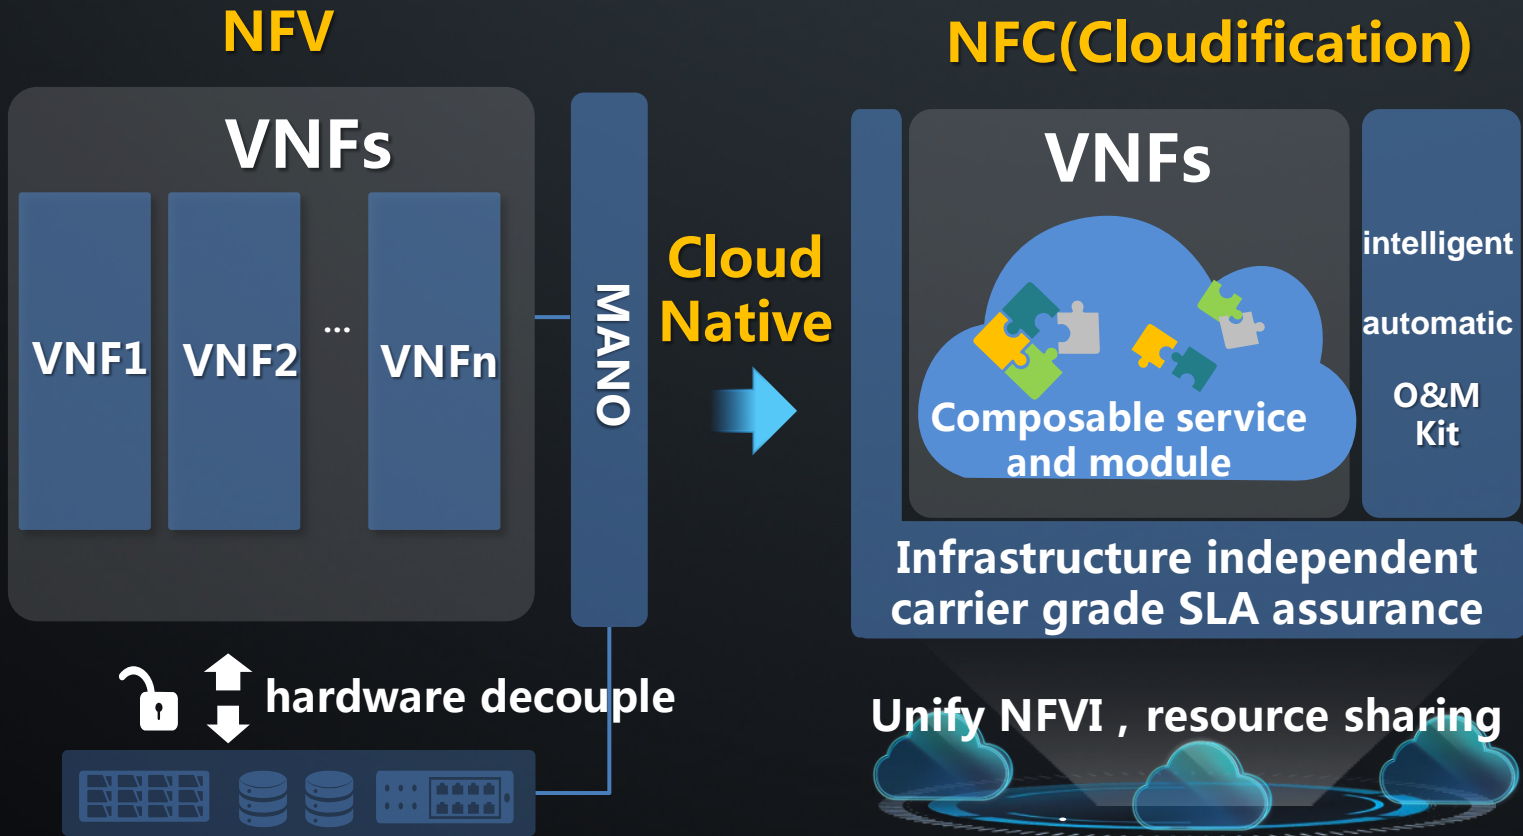

2. What's your next plan to leverage NFV benefits (automatic maintenance, quick TTM, and etc.)?

- A. To Enter Enterprise Or Vertical Market
- B. To Build An Autonomous Network
- C. To Provide Hosting Service To Mvno's
- D. Others

# Maximize NFV potential based on Cloud Native

**Robust : High reliability independent of the infrastructure**  
99.9% Infrastructure , 99.999% service reliability

**Elastic : service lossless**  
Service lossless Scaling, Resource On-demand

**Efficient : Automatic and intelligent O&M**  
Cross - layer analysis, fault locate, and recovery

**Agile : Lego style service composition**  
TTM from "month" to "week", trying new service quickly with low cost

# Introducing key technology considering the business value as the core target

**Key technology** Stateless design    CI/CD    Automatic OM    Micro service    Container    DevOps

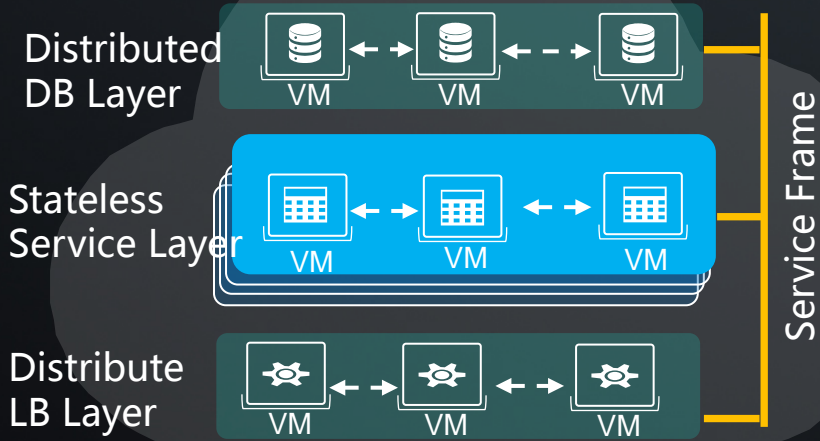

Introduce step by step in pace with business evolution, not hastily

# Stateless Design : The Foundation Of Robust, Elasticity And Agility

Stateless distributed software architecture based on Cloud Native concept

Support carrier grade SLA

Infrastructure independent

Re-define the VNF software architecture

**NFVI independent**  
**High reliability**  
 99.999%

**lossless, fast scaling**  
 VM VM

**Resource efficient**

N-Way redundant : Multi-point failure tolerance

Service rebalance quickly and lossless

Scale independently in different level

All active resource saving

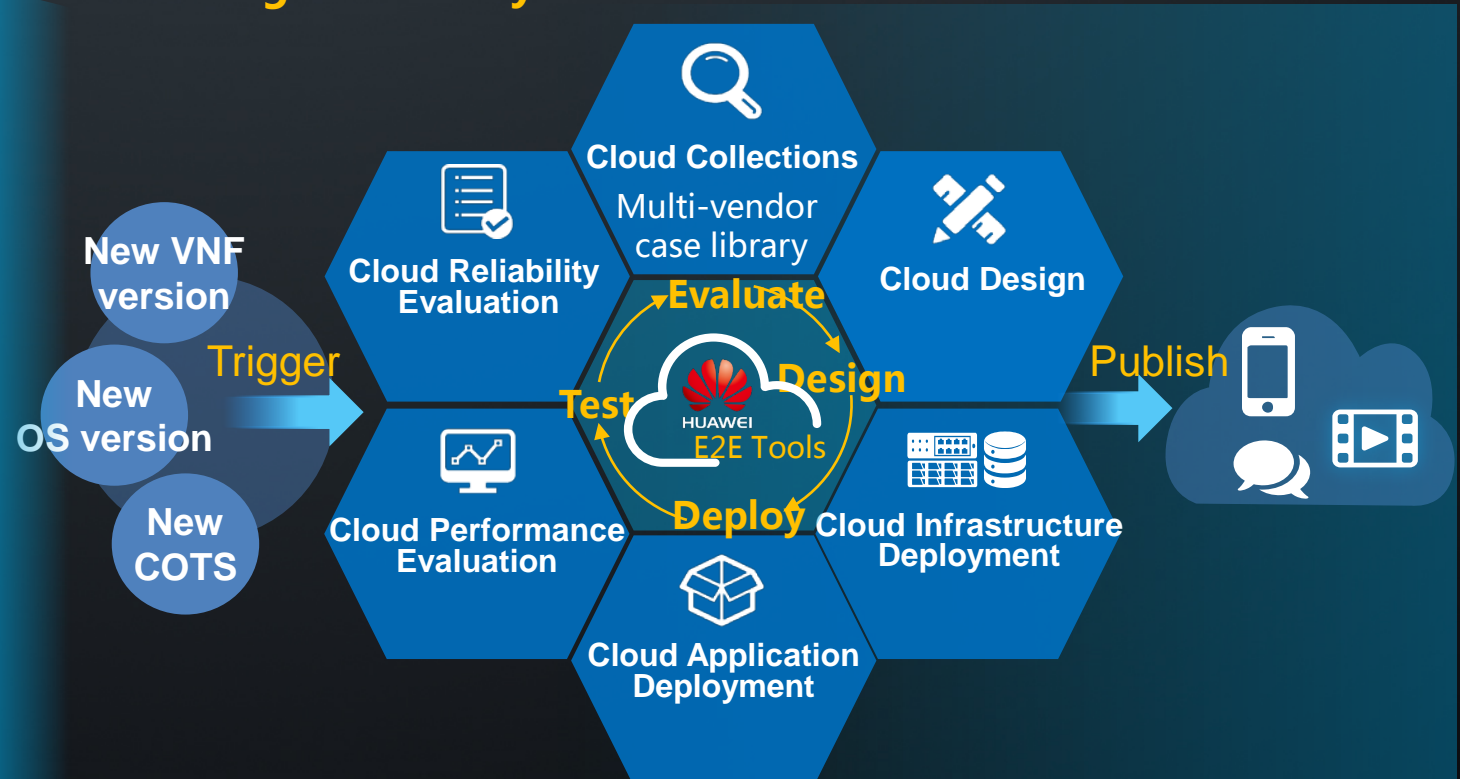

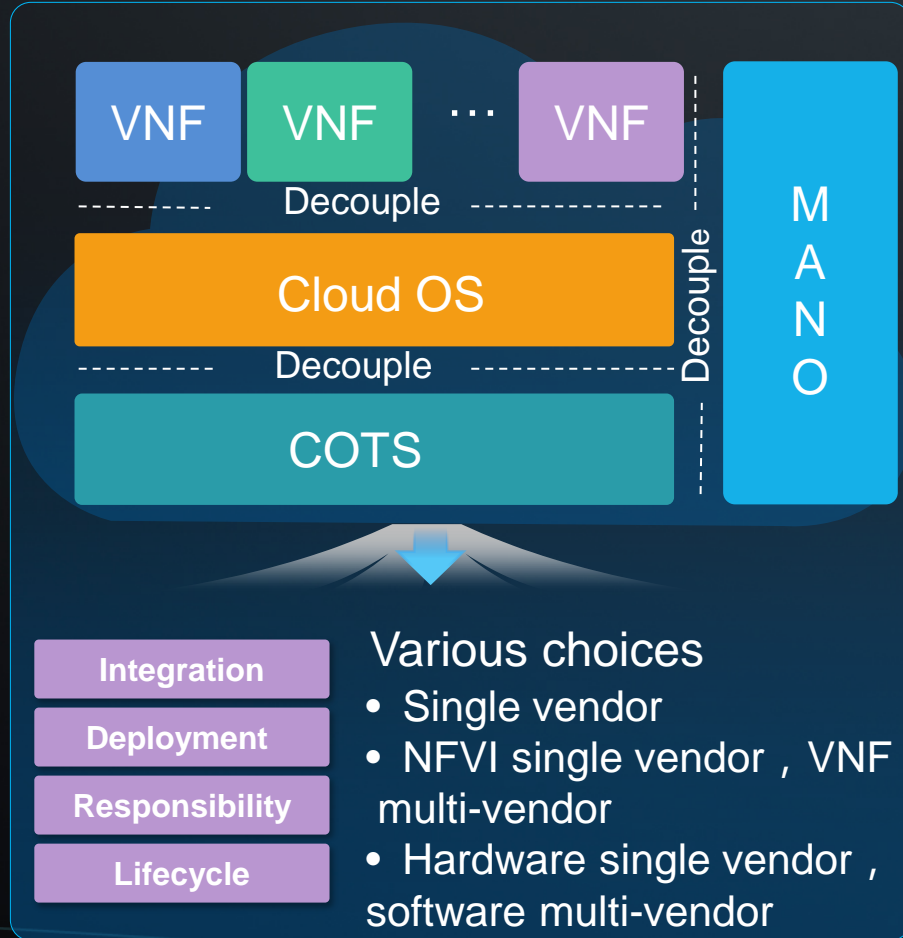

# CI/CD : The effective way to improve the efficiency under multi-vendor environment

NFV Target : 3 layer decoupled , Unified NFVI

CI/CD improves deployment efficiency, make the lifecycle management easy

- **80%** automatic test
- **2 hours** single VNF Regression Testing and deployment

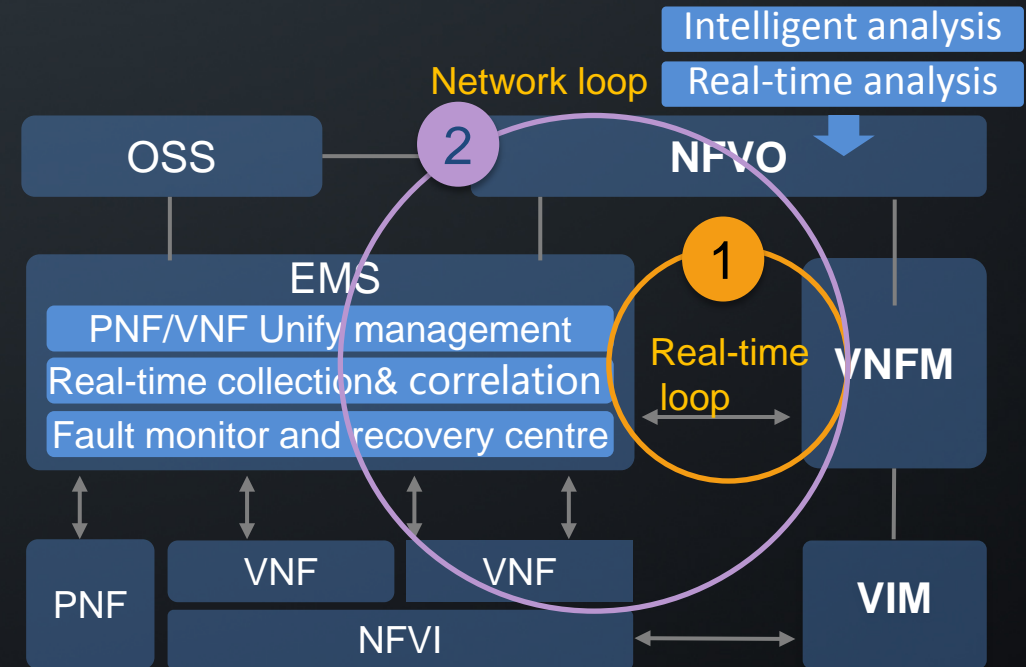

# Automatic O&M : The necessary means to deal with decoupled environment

Decouple and layered system makes OM complex

Automatic O&M System

OM complexity grows exponentially along with the network scale

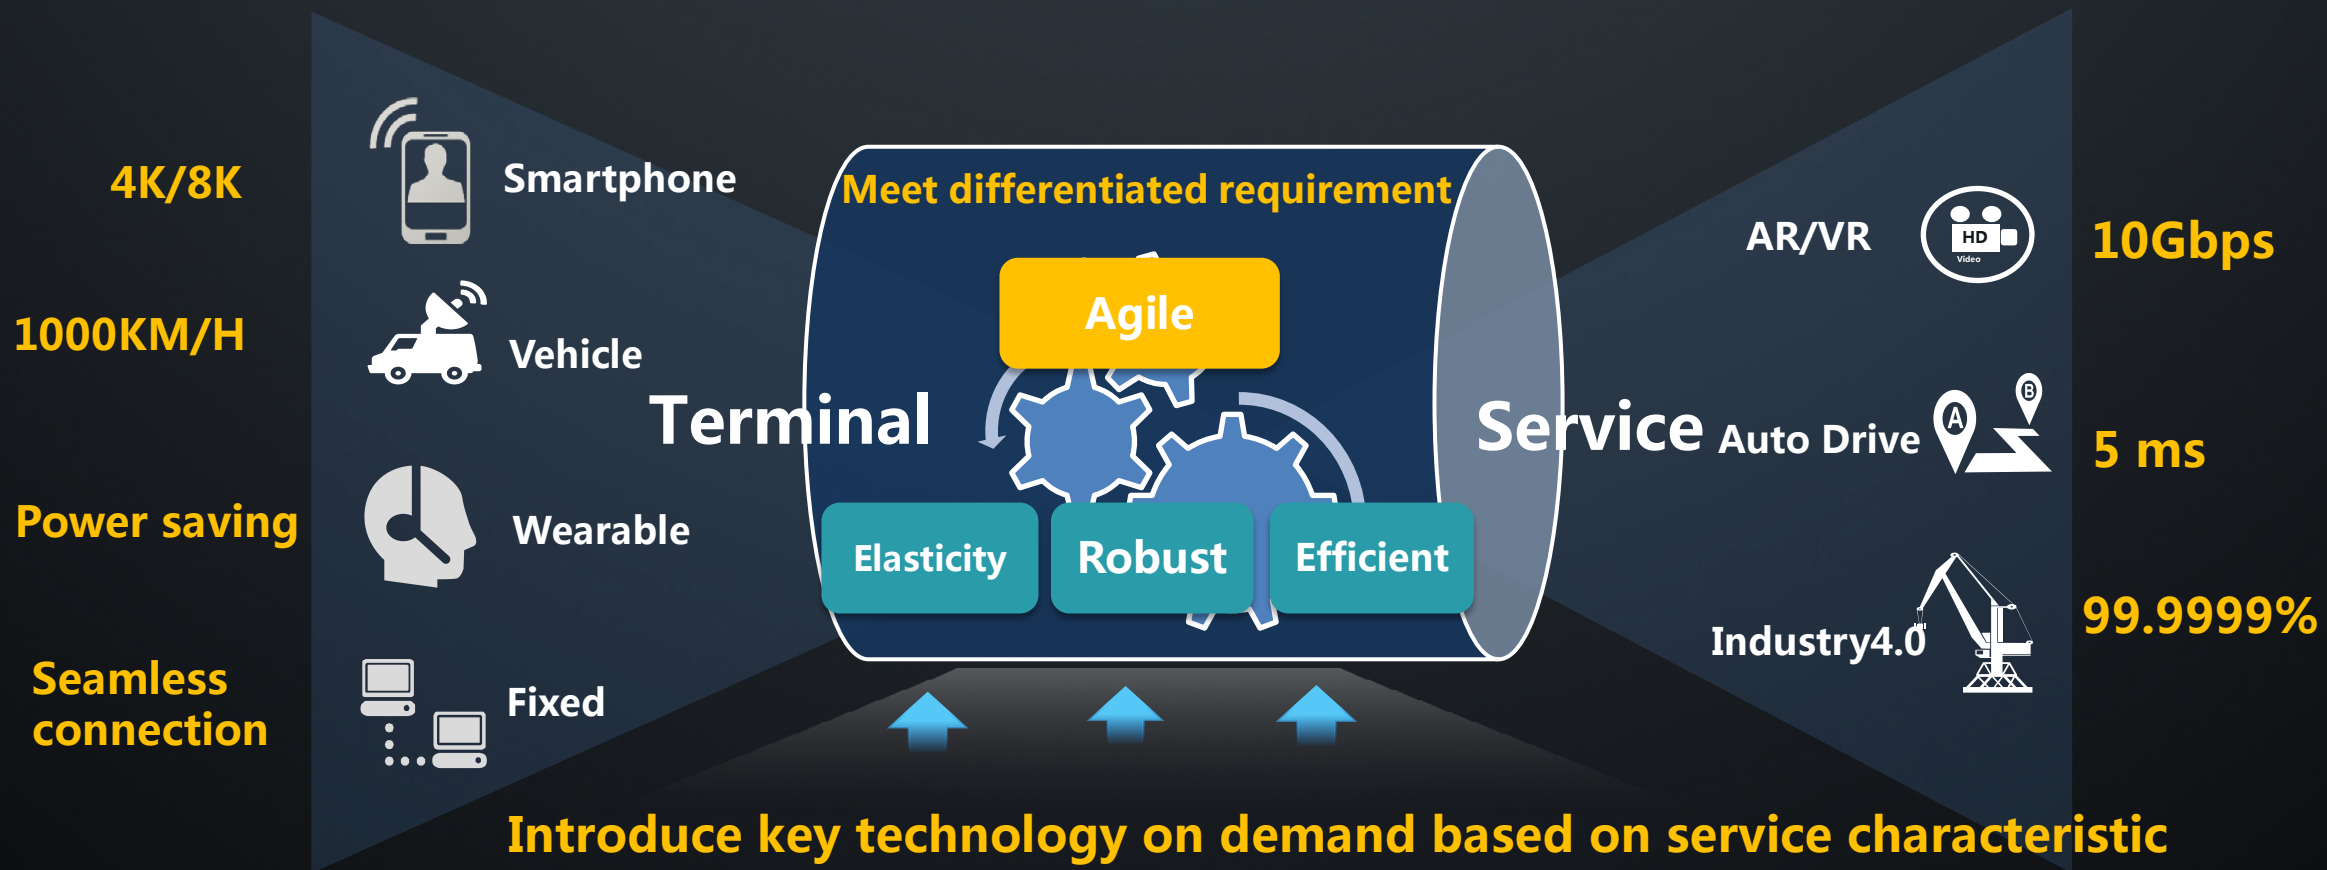

## Key capability :

- Cross layer, Cross DC, Cross service , unified management of the whole network
- Fault prediction proactively and real-time recovery
- Cross layer alarm analysis, correlation and fault locating
- Big data based orchestration and optimization

# Construct agile ability future 5G service oriented

( Micro ) Service

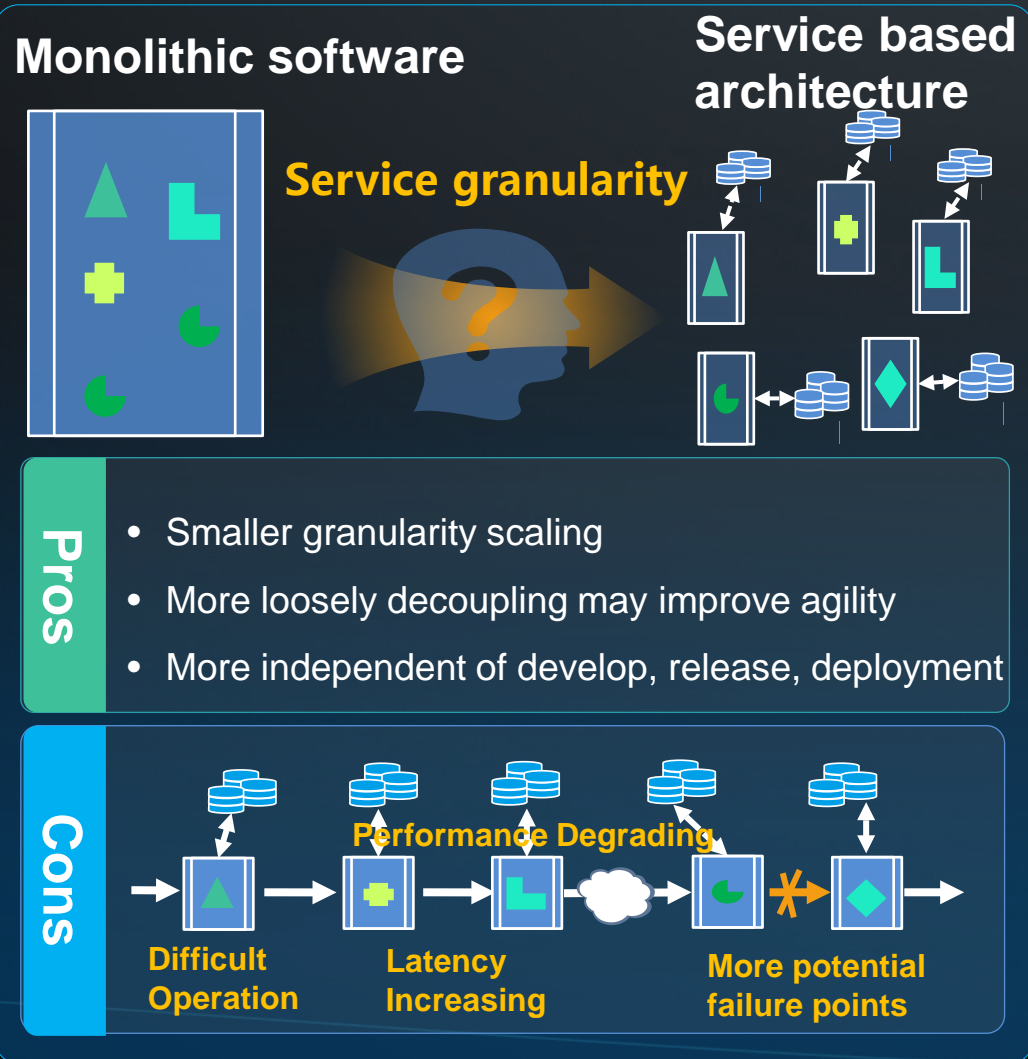

...

Container

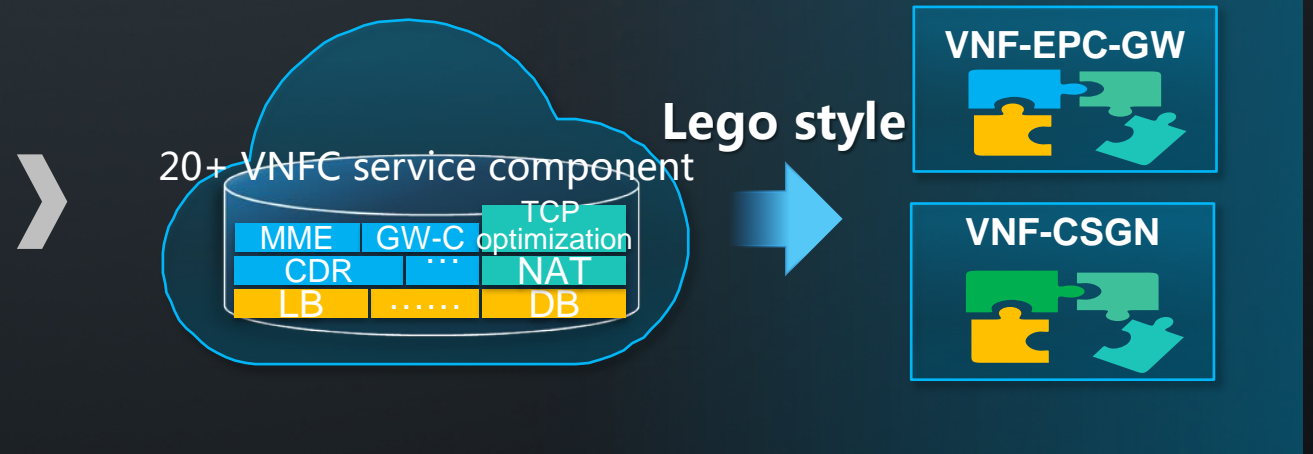

...

DevOps

# Micro service : service architecture is key point, "Micro" must consider the service characteristic

## Stateless distributed service based architecture

## Further "Micro" Principle

- Change Fast**
  - Such as IoT, enterprise, policy control, video services must be further "micro"
- Basic Service**
  - Basic voice, data service such as EPC、IMS , must be further "micro" in pace with 5G
- Mature Service**
  - Such as 2G/3G MSS、STP, may be further "micro" if clear value is seen

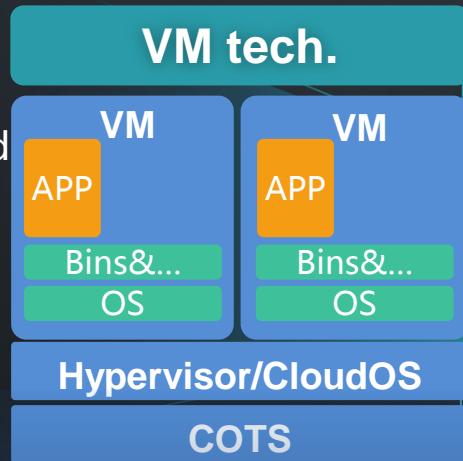

# Container : may coexist with VM in different application scenario

## Pros

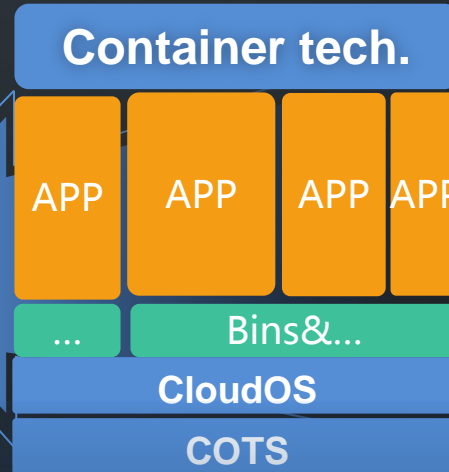

- Maturity in commercial deployment and standard
- Strong isolation
- Better security

## Cons

- Slow create and start up ( in minutes )
- Big Image

V.S

## Pros

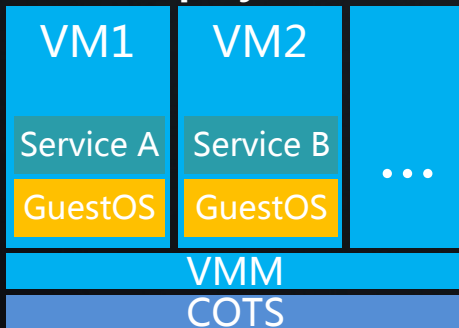

- High resource efficiency
- Better performance
- Quick start up and scale (in seconds)

## Cons

- Weaker isolation
- Eco system not mature comparing with VM

## Multiple deploy mode , choose according to different scenario

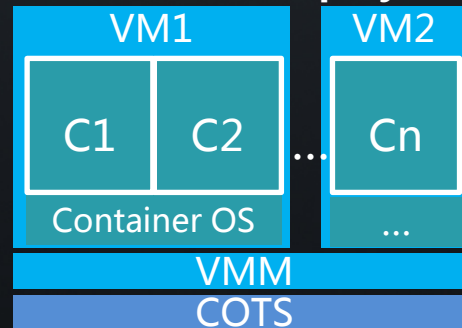

### VM deployment

**Pros** : high maturity and security

**Cons** : performance lower

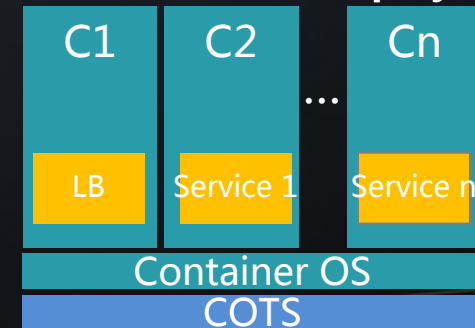

### VM+Container deployment

**Pros** : High security, flexibility improving

**Cons** : performance loss

### Bare metal container deployment

**Pros** : higher performance and flexibility

**Cons** : weaker security, better to cooperate with micro service

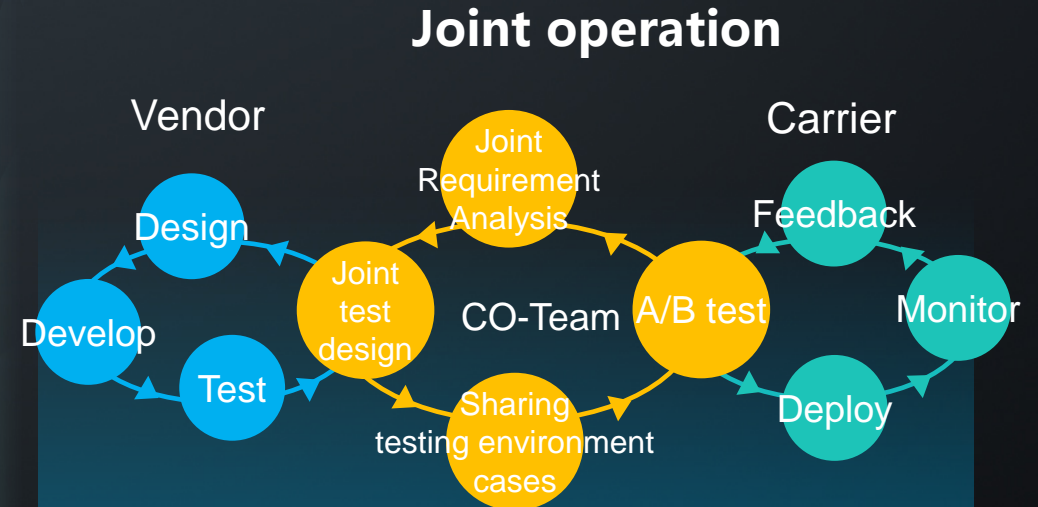

# DevOps : Fully consider the difference between CT and IT

IT **V.S** CT

Self develop and operation	Vendor develop Carrier operation
Powerful, complete develop team	Lack experience in development
Numerous service	Basic pipeline service is main stream

**Telco DevOps**

**Suitable application domain**

# Huawei is actively exploring and practicing 5G

**2017shanghai MWC  
With China Mobile,  
present the first 5G  
core prototype based  
on micro service and  
container**

**2017 MWC  
Present the EPC-GW  
based on the service  
architecture and  
container**

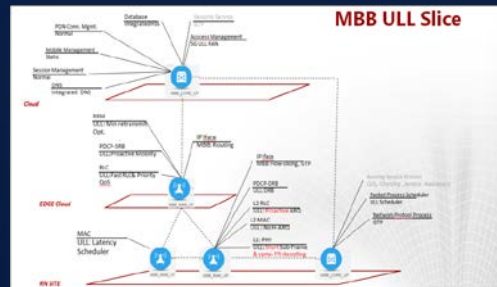

•Generate on demand

•Deploy on demand

•Develop on demand

**2016&2017 MWC  
DT&Huawei  
present the 5G  
network slicing**

- MBB ULL Slice
- xMBB Slice(AR)
- GLA Slice(Robot Arm)
- FMC Slice(4K Video)

# Huawei NFV solution win the best technology enabler prize of GSMA

2017 IMS  
World Forum

2017 Globe Policy  
Control Conference

5G World  
2017

Huawei NFV solution win  
**2017 MWC “best technology enabler”**

**Best vSBC  
solution**

**Best vPCRF  
operation architecture**

**Best 5G Core  
Development**

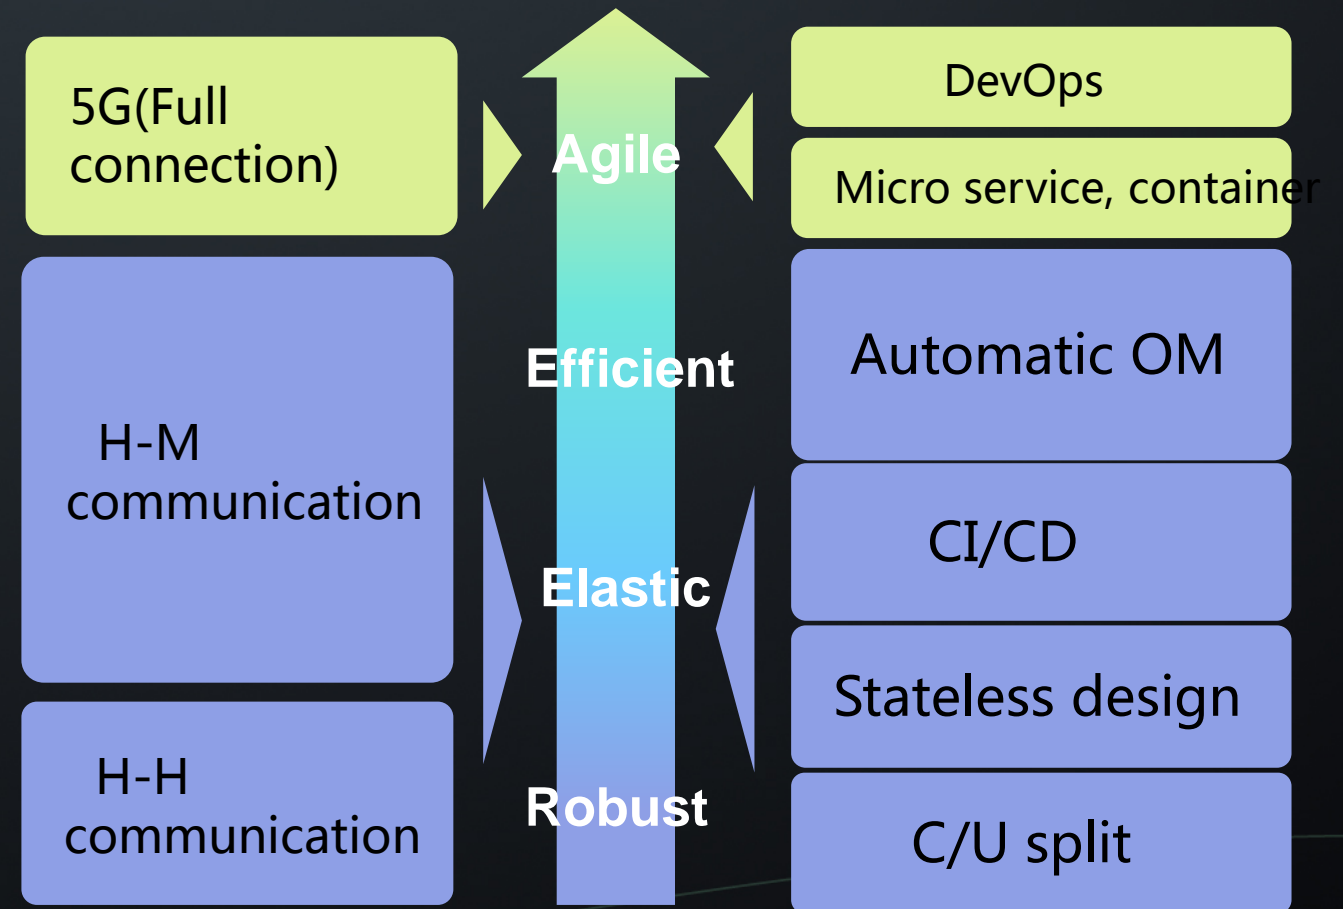

<https://www.globalmobileawards.com/best-technology-enabler>

# Summary : Towards CloudNative, Embrace the future of the all cloud

- The rapid developing new IT technology, which Cloud native is the representative, shall be introduced into the telecom domain, with the consideration of business essential
- The introduction of new technology must fully consider the different SLA requirement, application scenario, developing and operation mode of telecom service from IT

# Thank You.
